

CONCENTRATED CHAINBREAKER MICROBE BLEND

CASE HISTORY of Eastern Kansas Water Flood

In 2024, the data only shows 10 months production, however it was on track to do 5084 bbls that year. If you go back 5 years from 2019, there are 22,131 bbls of oil production in total.

If you go ahead 5 years from 2020, there is a total of 25,716 bbls of production. This difference of 3585 bbls of oil, at \$55.00 per bbl, equals \$197,175.00 of extra cash in your pocket.

What we see here on the right, is a picture of tubing that's been in the hole for 8-12 months. They had to pull the tubing because of hole in it from corrosion. That's common that they only get 8-12 months out of their tubing.

On the left, we see tubing that's been in the hole for over 3 years. It's nice and shiny and the corrosion is mitigated.
